

To enable your business

Uniscape IT-Services

Uniscape is an enterprise that provides IT-services to commercial real estate tenants. IT is a broad concept and Uniscape strives to fully unburden its customers. We are always available for IT advice or enquiries to see what Uniscape can do for you. The backbone of our large array of services is a vast (open)fibreglass network, allowing us to realise any kind of connection.

Connecting you to our network is easy. Investments in infrastructure and digging have already been made by Uniscape. You could be connected to our fibre-glass network within days, without any setup costs (beware, this may vary based on your location. Make an enquiry about the current situation). Our fibreglass network allows us the unique opportunity to set you up with a complete service package.

Clear view

A big advantage of a fibreglass connection by Uniscape is that you have access to any provider. Besides offering an open connection, Uniscape provides internet and telephone services at a price below market value. Devices like fire- and security alarms are also easily connectible. Thanks to the use of advanced security technology, the fibre-glass network of Uniscape is highly suitable for the realisation of a private network, accessible only by your organisation.

Nationwide coverage offers you many advantages. Some of the most convenient advantages Uniscape B.V. offers you are: A single, clear bill, and a single point of contact that knows your building (and your organisation) down to the smallest details! In addition to this, we can reach a great network speed. Without any complex configuration work we reach up to 500Mbit per connection. Fast VPN or Darkfibre connections are also immediately available(connections to back-office or abroad) up to 4Gbit per second(4092 Mbps!).

Together, we will select a package including all the services you need. Our wide array of services currently includes:

Cloud

Cloud Service Desktop Online – A Microsoft based desktop, available to you everywhere on the internet. In addition to the well-known Microsoft Office software it is possible to get access to customer-specific business applications within this desktop environment. Your data will be stored securely and without delay at our data centres located in Zoetermeer and Utrecht.

Cloud Service Exchange Online – Access to your mailbox from anywhere, at any time. By using Outlook, a web browser or your phone/tablet, your Email, calendar, contacts, tasks and notes will always be available.

Cloud Service Server Online – Our high performance and redundant virtual infrastructure offers you all the freedom you need to configure your servers. Start small and add memory, processor power or storage capacity as you need. Downgrading is no problem to us either. Everything “to enable your business”.

To enable your business

Infrastructure

Co-location and Private rack space – Your hardware will be placed in our data-centre. The way this is done is up to you. Varying from a single server, to a whole private rack just for your business. In addition to this, we offer services like backups and monitoring. A large benefit is that the speed of the network can be just as fast as your local network, as this runs within the Uniscape network! Slow connections and waiting for programs will be a thing from the past.

Supplier of hardware – Uniscape is supplier of hardware such as servers, network, laptops, etc. We have a suitable solution for all your needs. No more difficult product comparisons.

Services

Help-desk for office, e-mail and hardware problems – We have readily available knowledge about your specific situation and environment. This can mean a significant cost reduction in your local IT department.

System management for standard- or custom made software – By proper management and periodic maintenance, the continuity of your network is made sure of.

Internet

Website Design and Hosting – Completely in line with your needs and wishes we can create your website. Where applicable, we will link your web applications to your business software. Your customers will have a direct line with your business and back office. This will lead to a cost reduction in the front office.

Consultancy

Optimisation of business processes – More often than not there is much profit to be made by optimizing a company's business processes. Uniscape analyses and gives advice on areas of ITIL and Lean.

Selection and implementation of standard business software – Because we are familiar with the business processes and IT environment of your company, we are able to select and implement the best suited software for your business.

Quality

Testing of software – We never go live with an untested IT-environment. Only after thorough testing we consider a new environment ready for use. On request we can do this for software supplied to you by a third party too. Reviewing offers, plans and designs is day to day work for us.

Relieve of IT – Many companies focus on their core-business. All non-core processes are outsourced. If it comes to IT, Uniscape is where you need to be!

TO CONCLUDE

We continue to add new services to our selection. In everything we do, we strive to take a burden off your shoulders. No longer do you need multiple companies to help you with all your IT needs, but one IT-enterprise that knows all your internal and external IT needs and issues, and solves these together with you.

Our goals will always be:

- Lowering your TCO.
- Working for you, and with you, in a more efficient way.
- Clear and open communication.

A problem to you is a challenge to us. Together with Chalet Group, we are proud to assist you as our client and look forward to a long lasting relationship!
